

# THIRD PARTY INTEGRATIONS

To realize the benefits of an end-to-end solution it is sometimes necessary to integrate with applications outside the iManage Platform. By integrating with a third-party application, the benefits of the iManage platform are multiplied by the new benefits introduced.

iManage has partnered with key, complementary technology vendors to provide the combined benefits of both technologies. Working very closely with these partners, the integrations have been crafted to ensure that they help solve real business problems that professionals face every day.

Real business problems are comprehensively solved

No need to coordinate or align multiple software vendors

Content remains protected by iManage's governance controls throughout

Get started quickly and with confidence

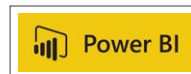

Multiply business value by combining solutions

The integration is supported by the vendors' support teams

Partners contribute to the solutions by providing a range of functionalities. Examples include:

- workflow functionality, to present information from multiple sources (including data extracted from Extract) to be presented in a consolidated user interface and enabling repetitive processes to be automated;
- reporting functionality, which allow for the intelligence found in the contracts to be visualised and presented, enabling the key decision makers to make well informed decisions;
- document automation, which allows data extracted to be used to populate fields in document automation allowing teams to efficiently draft high volumes of amendments and consent letters.

### Looking for something not on this list?

The iManage Contract Intelligence team would love to hear your ideas for any future integrations with our solution. Let us know your ideas by speaking to your iManage contact or emailing us at: [extractfeedback@immanage.com](mailto:extractfeedback@immanage.com)
